Jacob Canada

Topic 1: Hardware

- I asked for recommended hardware for this project; I used some of its recommendations
- While not all of its suggestions were helpful, I did use two main ones:
 - Adafruit SSD1306
 - Adafruit Tactile Buttons

Topic 2: Software

- I also asked for libraries to use with the Arduino IDE.
- The main one it recommended was AccelStepper, which was a game changer.
- It also recommended the Adafruit display library, which I have used as well.
- It also generated some code to make the buttons work, which I used for testing.
